Noodle Seed

Turn 2-6 Week Software Projects into Minutes
— No Developers Required —

Solving a Real Google Problem

- Google teams needed 2-6 weeks to build software projects
- We compress to minutes with no coding skills
- 15 Google employees using platform (12 active past 30 days)
- Business users create apps with embedded AI agents
- Eliminates cross-team coordination bottlenecks

Proprietary Technology

- Seed Specification: 25x more efficient than direct code generation
- AI agents replace multiple developer and design roles
- One interface builds UIs, APIs, and automations
- Works across cloud platforms without manual integration
- Open source core with proprietary enterprise features

Massive Market Opportunity

- Prototyping software market: $4.5B+
- Only 29% of software projects on time (Standish Group)
- AI-assisted development cuts time by 50%
- Market growing at 11% CAGR through 2033
- Expanding to broader enterprise software market

Team & Investment

- Founder: Ex-Google AI/ML leader with 15+ years experience
- Strong technical team: 4 senior founding engineers
- Hiring: Amazon Principal Engineer as CTO
- $500K raised from strategic angels

12-Month Roadmap

- **Q1 (Completed):** Launch Beta, Seed Spec MVP, Onboard Google
- **Q2:** Agentic Workflows, Agent Building, Automation
- **Q3:** Enterprise Security, Scale Features
- **Q4:** B2B Focus, Commercialization

Seeking $1.3M Pre-Seed Funding

- **35% Core Technology:** Language, ML/AI, Infrastructure
- **30% Product Dev:** Full-stack, UX, Testing
- **20% Go-to-Market:** Customer Success, Sales
- **15% Operations:** Legal/IP, G&A, Buffer
